

New dimensions for energy medicine in hopeless cases

Mohamad Elnaggar, Fatma Eltoweel, Yasser Elnaggar, Egypt.

Summery:

This study presented two cases in which the role of today medical treatment stopped at certain points and refused any other trials for therapy.

Energy medicine started at these certain points and diagnosed the patient on the energy level and planned the therapy for energy disorders which were corrected and this balance was reflected on improvement of chemical and pathological changes of the body and the patient improved clinically. This improvement is sufficient for the patient to return back to normal daily life in a very good health. Also it restored new life for some patients which were lost their hope.

Introduction:

All vital processes in the organism are influenced and controlled by electromagnetic oscillations. The electromagnetic processes according to the latest scientific findings are functionally superordinate to the biochemical process (1).

Matter is a manifestation of energy. Biochemical processes in the organism always have a component in the domain of the photons that is the quanta and electromagnetic waves. It can therefore be readily explained that the organism at this level supplies us with information which is not available to us chemically, but only by electronic means.

The disturbance of biochemical sequences in biological systems can be regarded as a disturbance to the order of electromagnetic oscillations in the body, triggered by exogenous and endogenous influences.

Disease is a disturbance of electromagnetic field. Many years of solid research have proven that this is so. These research results run counter to the widespread belief that biochemical processes are causal (2).

Abraham concluded that disease must be regarded as a change in the arrangement and number of electrons in the molecules which results in a change in the molecular structure of the cell and later becomes visible as a change in individual cells under the microscope (3). So it can be understand from all these data that some body disorders can not be explained on material level.

Case 1: Liver disease

A male patient 62 years old, Retired General in the army, came to me on 8/5/2005 morning in a very bad mood because his physicians decided that liver transplantation is the only hope to complete his life. He decided to sell his own land with million Egyptian pounds (about 200,000 \$) and his friends will collect for him another million then to go to America to do liver transplantation, but one of them advised him to be seen by Dr. Yasser before. He told me that he was under strict medical treatment in the army hospital for 3 years, no improvement and he was deteriorating. His diagnosis was liver cirrhosis, enlarged spleen, tiny left renal upper pole stone, ascites, edema of lower limbs

and severely fatigued although he was under strict diet regime and medical treatment and had virus-c hepatitis since 2004. His alpha-feto proteins were 332, platelets 86, serum bilirubin 3.7, SGOT 232, SGPT 214. I tested his blood sample by MARS III radioing device, I did general test and therapy, I gave him homeopathic medicines both orally and by broadcast every 6 hours for 30 minutes, but I did not stop his liver supporting drugs and diuretics.

After about one month his alpha-feto proteins decreased to 200. This made him very happy, as if a died man came to life again, and became very trusted with my way of therapy and followed me strictly in every order regarding his health. At the same time I made for him diet test by MARS III radionic device, and advised him to prevent some specific foods from his diet, during the period from 8/5/2005 to 23/9/2006. He was always up but sometimes down and sometimes got common cold, diarrhea and other mild diseases and I allowed him to be treated by natural herbal formula from pharmacy, but sometimes he was obliged to take chemical drugs by other doctors like ophthalmologist or others. Any how I allowed him to live normal life with no major restrictions and his mood improved so much.

His main blood tests during this period were as follows (table 1):

Date	RBCS	Alpha fetoprotein	Bilirubin Total	Bilirubin direct	SGOT	SGPT	Serum Albumin	Globuli	ESR	Platelet	WBCs
	4 . 5 – 6 million / cmm	Up to 10 ng/ml	0 . 2 1. 2 mg / dl	Up to 0 . 2 mg / dl	Up to 40 U/ L	Up to 40 U/L	3 . 5 – 5 g / dl	2 . 2 – 3 . 8 g / dl	1 st h (5 – 7) mm	15 0 – 250 thousand / cmm	4 – 11 thousand / cmm
18/4/2005	3.3	332	3.7	1.7	332	214	3	5.4	30	86	5.3
20/8/2005	3.3	49.6	3.4	1.6	120	74	3	5.4	30	86	5.3
21/9/2005	3.4	37.1	4.6	1.8	100	29	2.7	4.5	30	86	5.4
19/11/2005	3.6	42.7	4	1.8	129	88	2.9	5.3	55	80	5.3
27/12/2005	3.5	38.4	3.2	0.8	97	68	2.6	5.7	55	100	5.5
5/2/2006	3.3	37.9	2.3	1.3	87	61	2.9	5.3	47	101	5.5
16/4/2006	3.6	27.2	2	1.3	91	67	3.1	4.9	25	107	5.1
3/9/2006	4.1	16	1.7	1.2	44	36	3.4	4.2	18	118	5.7
7/10/2006	4.0	9	1.6	1.2	39	33	3.3	4	15	123	5.6

Always I changed his therapy every about 2 months using MARS III radionic device, sometimes I tested specific items separately as pollution, heart, liver, glands, lymph, macrophage, and I gave him it as therapy in form of homeopathic medicines and at the same time as broadcast. After about 18 months follows up his alpha feto protein became 9 and other liver functions were satisfying for his pathology in liver and spleen and his general health was good.

Discussion:

This was a clear case, explaining that the usual medical chemical treatment stopped at one point, and the highly qualified physicians decided that there was no need for further medical treatment any more and liver transplantation was indicated as the best solution. I tried energy medicine using MARS III radionic device for diagnosis and therapy and follow up with the routine medical investigations which improved denoting stabilization of his general health and he was satisfied by his life after avoiding transplantation operation. I faced with this risky case, two big problems: the first it was a case of advanced liver disease indicated for liver transplantation and the second he was a very famous man, and there was no way to escape from treating him because he

was internally refusing to do the operation and at the same time failure for me would cost me much but I tried my best and MARS III device helped me much to overcome failure, to balance all body functions in addition to liver functions, to select the best suitable diet and to achieve the best results.

Case 2: Eating problem in a child

Hesham is a little boy with a serious eating problem which affect all areas of the family life because he was the only child of an Egyptian family.

No problems were reported dating pregnancy. He was born by caesarian section and weighed 3 kilos. He was breast – fed until the age of 13 months.

His mother reported that; Hesham’s eating was age appropriate until he was two years old. The mother mentioned that; at that time the maid used to feed him by stuffing him with food and he started to reject the food, which was previously liked. From that time he was refusing all types of foods and for 5 years except rice and molokheya (a green leafy vegetable like spinach famous in Egypt). Sometimes his mother tries to put other vegetables in the mix and as long as the color stays the same, Hesham was willing to eat them. In addition to this, he drinks lots of milk and juices. He was afraid of new experiences and his eating problems have caused a great deal of tension for the family. His poor gain of weight was another cause of concern to the family. He was investigated by many doctors in Egypt and outside, with no sure diagnosis and no effective treatment at all and no improvement in his eating habit. His mother has been overloaded emotionally and physically due to this problem. In December 2003 she was diagnosed with breast cancer, had lumpectomy and received radiation therapy. After failure of all means of material medicine someone advised his mother to try energy medicine. She visited me on 22/5/ 2006 and I reported in my notes on MARS III device that: 8.5 years old child, fear of eating any type of food since he was 2.5 years old and from 2.5 – 6.5 years old he was eating only rice and molokheya. He had debility and was very intelligent. I took from him a hair sample and tested it with MARS III radionic device and I prepared remedies for him and at the same time I sent them to him by teletherapy. Also I made a test for the foods which must be given and which prevented in the next 3 months and advised his mother to follow it. Hesham was a delightful, little boy who was all too aware of his difficulties. However he showed both willingness and perseverance and promised me that he would help me to overcome his problems.

Now his mother would tell his story in her words and what happened to him:

His mother report

Hesham has suffered for 6 years from severe eating disorders. At the age of 2.5 he rejected all kinds of food. He chose to eat rice and molokheya only, for 3 meals, for 4 years. It has greatly affected our family life, both on the social and emotional level.

As years went by, he miraculously grew because I, his mother, started to add other necessary ingredients in his meal, small pieces of meat or carrots or potatoes is as far as I could do without him noticing. He drank a lot of milk, an average of one liter a day. This, with daily vitamin supplements, made him survive.

After doing so many blood tests, laboratory tests, brain tests, thyroid function, kidney and liver tests, and so much more all results indicated that he is a perfectly healthy boy. I was losing my mind.

At the age of 8.5 I decided to investigate the area of homeopathy, knowing of Dr. Yasser El-Nagger through friends at work, I decided to go. It just two visits and a hair analysis to completely change our lives to the better.

We started the treatment in June 2006, today it is September 2006. In those few months my boy has, for the first time in his life, eaten new things. The list below is written in the order of his achievement.

In the month of June, he started eating;

- Small chicken nuggets.
- Small chicken fingers.
- A piece of bread (white).
- A small piece of bread with a bit of honey.
- Small macaroni with polonaise sauce.
- Chips.

In July, he started eating:

- A complete sandwich of cheese spread.
- Switched from white bread to brown.
- Sandwiches started to have different shapes (long, round or triangle)
- A cheese or egg sandwich.
- Scrambled eggs with butter.
- Scrambled eggs with butter, minced meat and cheese.

In August, he started eating:

- Pizza with cheese and sauce.
- A chocolate sandwich.
- Peanut butter and honey sandwich.
- Peanut butter and jam sandwich.
- A small muffin.
- Fresh orange juice (about 3 glasses daily).
- A small plain hamburger sandwich.

In September school started, so there is less time to try new things, since he is very, very slow to chew and swallow. The hamburger sandwich is still a challenge for him. Things like spaghetti and bigger size macaroni or chicken is still rejected. His fear of color, shape, texture and size is decreasing, but we still have a long way to go. He does not yet eat fresh fruits or fresh vegetables. I have to chop a piece of fresh tomato for him to eat, only if it is mixed with his food. He has also succeeded in eating the following, when mixed with rice and a bit of sauce:

- Aubergines.
- Okra.
- Zucchini.
- Potato.
- Soap lentil.
- Spinach.

He has, in August, tasted small chunks of mango, but he still finds the smell and texture unattractive. My boy is a high achiever at a British school in Cairo. His room is full of certificates that reflect his success at school and at his karate team.

He knows that FOOD is his constant battle, but I make him feel so proud of his achievement in all areas. He will be 9 in December. I hope that as he puts on more

weight, his energy will increase, and his self-confidence in his bodily abilities will also increased. Before homeopathy he was 22 kilos. Today he is 25 kilos. I hope he will always improve and stay in good health.

The mother
15/9/2006

I repeated the test every two months and the diet test every 3 months. During writing this case he achieved a great progress in eating more than 70 types of foods and tried most of the food his mother wants, also his weight increased two kilos more and became very happy child and his mother became very happy also and all his family, relatives and friends.

Discussion:

It was clear from this case that although it was diagnosed on psychological basis, because there was no organic cause, no treatment was effective, either chemical, psychological or rehabilitation and stabilization of energy balance cured the child as it controlled the organic, mental and emotional state of the human body.

On the other hand there were no side effects at all because what were given to the child were homeopathic remedies in the form of electromagnetic oscillations printed by the MARS III device on water drops or sent to the patient in the form of waves by teletherapy.
